TM3

Environmental monitoring solutions for your IT infrastructure

TM Environmental monitoring

The TM range of environmental monitoring solutions is designed to provide reliable and accurate information related to your IT infrastructure. The TM range is designed to suit any application from patch rooms to data centres. The TM3 uses the GSM and IP network for fast and reliable communication with the user. An LCD display provides instant information related to any abnormalities. Easy connectivity to Fire panel, generator and UPS units is achieved via dry contacts. Multi-site monitoring from a single console is achieved via our TM base software and NMS integration.

TM 3 features

The TM3 provides flexible GSM/IP based remote monitoring. Keep track of critical temperatures and other conditions and be notified immediately when current values exceed the normal range. Completely standalone and easy to use, the TM3 can be used for monitoring any abnormalities in sensitive areas like computer rooms and data centres.

- The unique SD card will provide internal backup.

- Internal 8 hour standby battery.

- Optional dual sim card makes the TM the most reliable monitoring system on the market.

- Fully programmable GSM/SMS matrix.

- 15 programmable dry contacts, 2 flood detection input and 4 NTC temperature sensor, 4-20Ma and relay outputs.
